

SCOTTIE RESOURCES LAUNCHES LARGEST EXPLORATION PROGRAM IN COMPANY HISTORY, KICKING OFF FULLY FUNDED 50,000 METRE DRILL CAMPAIGN

Vancouver, BC – June 16, 2026 – Scottie Resources Corp. (“**Scottie**” or the “**Company**”) (TSXV: SCOT) (OTCQB: SCTSF) (FSE: SR80) is pleased to announce the launch of its 2026 expansion focused drill program at the road-accessible Scottie Gold Mine Project (“Project”), located 35 kilometres north of Stewart in the Golden Triangle of British Columbia.

Scottie Resources Corp. has commenced its fully funded \$26 million 2026 exploration program, highlighted by a record 50,000-metre diamond drill campaign across its flagship project within the Stewart Gold District. Focussed on expanding and upgrading high-grade gold resources at the Blueberry Contact Zone and Scottie Gold Mine, the program also includes aggressive testing of multiple high-priority targets across the district, including the Bend Vein, the C and D Zones, the Serac Vein and Lakebed area, and the Domino target. The program will also include approximately 2,000 metres of drilling at the Cambria Property, marking the first-ever drill campaign on the project.

Combined with ongoing development and technical studies, (geotechnical, hydrogeological, and condemnation drilling for future development planning, extensive geophysical and remote sensing surveys, and expanded environmental baseline and technical studies, which are now entering their second year) the 2026 season represents a significant catalyst for resource growth and value creation as Scottie continues to unlock the potential of its district-scale gold assets in British Columbia’s prolific Golden Triangle.

“We are excited to have our largest exploration program in history now underway,” said Dr. Thomas Mumford, President & CEO. “The planned 50,000 metres of drilling represents an increase of more than 50% over all drilling previously completed by the company on the Scottie Gold Mine Project and will play a key role in advancing resource growth and conversion ahead of our planned Feasibility Study in the first half of 2027. With a strong team in place and a clear strategy for the season, we are well positioned to continue demonstrating the scale and potential of the district. We look forward to providing regular updates as results are received throughout the year.”

QUALIFIED PERSON

Dr. Thomas Mumford, P.Geo., President of the Company, is non-independent and a qualified person under National Instrument 43-101, has reviewed and approved the technical information contained in this news release on behalf of the Company.

ABOUT SCOTTIE RESOURCES CORP.

Scottie Resources holds 100% interest in the Scottie Gold Mine Property, which includes the high-grade, past-producing Scottie Gold Mine and the adjacent Blueberry Contact Zone. The Company also owns a 100% interest in the Georgia Project, host to the past-producing Georgia River Mine, as well as the Cambria, Sulu, and Tide North properties. In total, Scottie controls approximately 58,500

hectares of highly prospective mineral claims within the Stewart Mining Camp in British Columbia's Golden Triangle—one of the world's most prolific mineralized districts.

Scottie's current resource estimate on the Scottie Gold Mine Project includes a total of 703,000 gold ounces at an average grade of 6.1 g/t (Inferred category) in 3.6 million tonnes, highlighting the development potential for a significant near-surface, high-grade deposit. The Company's strategy is to continue expanding this resource and to define additional mineralization around past-producing mines through systematic drilling and surface exploration.

The Company has recently completed a PEA for the Scottie Gold Mine. The report, entitled "Preliminary Economic Assessment for the Scottie Gold Mine Project" was independently prepared by Tetra Tech of Vancouver, BC, Canada in accordance with National Instrument 43-101 – Standards of Disclosure for Mineral Projects ("NI 43-101") and has an effective date of October 28, 2025. The PEA outlines a robust Direct-Ship Ore (DSO) development scenario with strong economics and significant upside through a potential toll-milling option utilizing excess capacity at the nearby Premier mill. The base case DSO project delivers an after-tax NPV(5%) of \$215.8–\$668.3 million at gold prices of US\$2,600–\$4,200/oz, respectively. Under the toll-milling scenario, project economics improve substantially, with an after-tax NPV(5%) of \$380.1–\$831.7 million (no agreement currently in place). The PEA estimates initial capital costs of \$128.6 million, average annual production of ~65,400 oz gold over seven years, and a payback period of 1.7 years for the after-tax DSO case—reduced to just 0.9 years under the toll-milling opportunity at US\$2,600/oz.
